SUMMARY

Senior software engineer (13+ years) focused on identity and healthcare platforms: SAML and OIDC/PKCE single sign-on, SMART on FHIR authorization, Azure AD B2C, Auth0 and tenant access control on C#/.NET and React. Led AI engineering with guardrails for regulated code: coding-agent checks for secrets and PHI logging, and in-product AI with role-restricted operations.

SKILLS

AI and agents: Agentic workflows, LLM integration, OpenAI API, Claude API, MCP, Claude Code, Cursor, Codex
Backend and data: C#, .NET, REST APIs, SQL Server, SQL, PostgreSQL, Supabase, GraphQL
Frontend: Angular, React, TypeScript, JavaScript, Astro, Svelte
Identity, security and healthcare: OAuth/OIDC, SAML, FHIR
Cloud, integrations and operations: Azure, AWS, Cloudflare Workers, Docker, Stripe, Kafka, Splunk
Testing: xUnit, Vitest

EXPERIENCE

Senior Software Engineer, Opeeka Nov 2023 - Oct 2026

- Led the AI engineering effort: set engineering principles for AI-assisted development with Claude Code, Cursor and Codex and for agent workflows, and ran many demos of agentic workflows.
- Designed and built the front-end and back-end framework for the next-generation platform using AI, including how coding agents implement changes autonomously through knowledge profiles and automated flows.
- Implemented tenant-aware SMART on FHIR authorization for a .NET / Aidbox FHIR R4 platform: scope-and-role constraints, token exchange, launch contexts, introspection and membership operations, backed by a 615-test backend suite.
- Built IdP-initiated SAML single sign-on with tenant mapping and Microsoft Graph provisioning for a healthcare partner integration, in production since early 2024, and moved its signing keys into Azure Key Vault.
- Implemented Okta OIDC/PKCE sign-in with Azure AD B2C handoff, just-in-time provisioning, identity resolution and role/caseload provisioning for a state social-services integration, and fixed stale-session, redirect-loop and missing-timeout defects along the way.
- Built provider and administration apps in React 19, TypeScript, TanStack and Tailwind CSS with SMART/PKCE sign-in, covered by 158 and 68 automated tests respectively.

Senior Software Engineer - Lead, BENlabs Apr 2023 - Oct 2023

- Built browser-extension features across Angular, React, Vue and TypeScript with .NET services, including JWT authentication for AI-service integrations, and partnered with the ML/AI teams on product design.

Senior Software Engineer, Filevine Sep 2020 - Dec 2022

- Owned the Import service: built .NET APIs, integrated internal and third-party APIs, and supported reliability through monitoring on AWS and Docker.
- Built Angular and Svelte front-end workflows.
- Led Angular localization development and mentored junior engineers on architecture and API development.

Senior Software Engineer, Young Living Nov 2019 - Sep 2020

- Built Kotlin/Kafka microservices for event-driven fulfillment and third-party data delivery, from design through production, with Splunk monitoring, coordinating offshore development.

Senior Software Architect and Engineer, Alpine Testing Solutions May 2017 - Nov 2019

- Redesigned a legacy certification platform across Angular interfaces and .NET services, migrated WCF APIs to GraphQL, led design discussions and mentored remote engineers.

Senior Software Engineer, Jeunesse Global Apr 2016 - May 2017

- Migrated an AngularJS application to Angular, redesigned the administration application and built payment integrations.

Senior Software Engineer, Megaplex Theatres May 2015 - Apr 2016

- Built the company website, kiosk and digital-signage software.

Software Engineer, Virtuoso Branding Mar 2014 - May 2015

Software Developer, Gold Point Systems Jan 2013 - Mar 2014

PROJECTS

Mama Cabins, Co-founder and product engineering, mamacabins.com 2025 - Present

- Rebuilt the owner portal on Astro, React and Cloudflare over the existing Supabase database, with server-side cabin authorization, constrained admin impersonation, Hospitable photo synchronization and an importer designed for repeatable concurrent runs (119 passing tests).
- Directed and implemented an AI-assisted cabin marketplace built around Hospitable integrations: property onboarding, availability, review synchronization and owner workflows. Set product requirements, reviewed generated changes and owned integration decisions.
- Built cache-first availability search that normalizes Hospitable and PriceLabs calendars and overlays site bookings, handling check-in, check-out and stay-through date rules in the booking experience.

Janae, Founder and sole engineer (side project) 2026 - Present

- Built an MVP AI transaction-coordination app for real estate in Next.js, TypeScript and Supabase: about 40 typed tools for deals, tasks, documents, email and calendars under an eight-step execution cap.
- Fixed a reproducible class of contract PDF failures with field validation and Unicode/font handling.

EDUCATION

BS, Computer Science, Weber State University
